

SEMINARIO
Departamentos de Física Teórica I y II
Universidad Complutense de Madrid

INVITADO: Bengt Friman

GSI - Helmholtzzentrum für Schwerionenforschung, Darmstadt, Germany

TITULO: **Probing the QCD phase diagram with fluctuations**

LUGAR: FACULTAD DE CIENCIAS FÍSICAS UCM

DÍA: 24 de abril, 2012 (Martes)

HORA: 14:30

AULA: Seminario Dpto. Física Teórica I, Planta 3^a

ABSTRACT

I discuss the net-proton probability distribution and its higher order cumulants. Using properties of the O(4) scaling functions, I explore the generic structure of the cumulants and use chiral model calculations to explore their usefulness as probes of the freeze-out and critical conditions in heavy ion collisions at LHC and RHIC.
